

# Security System Management Made Easy

The cloud-based platform to help system owners optimize workflows, lower costs, and maximize the lifespan of their electronic security investments.

✓ DESIGN PLANNING

✓ INSTALLATION TRACKING

✓ WARRANTY & REPAIRS

✓ SYSTEM AUDITS

✓ DEVICE MONITORING

✓ VENDOR TRACKING

# Welcome to SiteOwl

SiteOwl is a cloud-based platform that helps security system owners and their teams confidently manage their devices, projects, and vendors.

We're on a mission to ensure that security teams within every organization have the tools they need to resolve the system headaches that arise when managing thousands of connected devices across multiple floors and locations.

**SiteOwl rescues security directors, managers, and other stakeholders from these issues by empowering them to do the following:**

Efficiently manage multiple security systems and thousands of devices from a single platform.

Monitor, track, and resolve problems swiftly via an intuitive visual interface and quick ticketing system.

Eliminate guesswork when planning upgrades by using powerful tools and a unique drag-and-drop interface.

*It's been a fantastic program for us, being able to centralize everything and have it in one spot, not have to dig through papers and spend hours of time. It's saved us money, I would never want to be without it.*

# Keeping Your System On Track

If you're one of the thousands of companies who keep track of your security system via email, spreadsheets, and old floor plans, you already know how difficult it is to manage and maintain your system.

Most companies do not have an effective system management process that enables them to collaborate across their teams, departments, and vendors. If that's the case for you, you're not alone. According to the Project Management Institute (PMI), about half of businesses suffer from that same problem.

**Only 47% of businesses have a formal process of transferring knowledge** from one part of an organization to another.

---

**1 in 6 IT projects runs 200% over budget**, on average, with a schedule overrun of 70%.

For most security system owners, the headaches don't stop with system management. Security systems need to be expanded and upgraded, but those projects are often subject to massive overruns both in time and budget.

SiteOwl helps you manage your system effectively by providing a cloud-based environment where your security team, stakeholders, and integrator partners can collaborate on security projects and system maintenance. Because your system information is updated in real time, you'll always know what you need to do to maintain visibility and ensure compliance at every stage of your system lifecycle.

# Design

## Clarity and collaboration with every security design.

Whether your team is budgeting for upcoming projects or planning expansion designs, collaborating with internal stakeholders and security integrators is challenging.

When creating floor plans, many security designers rely on paper mockups or planning software designed for construction teams.

This forces you, your integrators, and your vendors to undergo a tedious handoff process where information gets lost in translation and the best solutions for your company never materialize.

**SiteOwl changes that by giving system owners and security integrators all the tools they need to collaborate and share floor plans during the design phase.**

### Get the best designs faster with SiteOwl.

Keep floor plans, mockups, and notes for every project all in one spot.

Collaborate with system integrators and project stakeholders.

Living Floor Plans® help you accurately maintain your system.

Ensure that partners fully understands every aspect of your design.

# Install

Watch your system come alive in real time.

Installations are stressful and risky, and it's common for system managers to feel like they've been left out of the loop during the installation process.

When integrators and their technicians start a project installation, you're stuck waiting on sporadic updates to your project.

It's impossible to get a clear picture of progress without contacting a project manager who may not have all the answers right away or may be too busy with other projects to give you the update you need.

**SiteOwl improves visibility by giving teams an easy way to track installations, generate reports, and monitor progress.**

**Stay up to date with every aspect of your security project.**

Easily monitor project progress in real time.

Review images captured during the installation process to ensure quality control.

Stay in the loop with reports and metrics covering project status.

Gain visibility and transparency throughout the entire installation process.

# Manage

Ensure security readiness with confidence.

Disorganized information is often the root cause behind operational inefficiencies, ballooning overhead, and team confusion.

When nobody on the team knows where to find essential information or how to report outages and system problems in an effective way, even the best systems fail.

This leads to unsecured environments, elongated response times, delayed repairs, and an overall lapse in security readiness.

**SiteOwl makes it simple for your team** to access all system information in a matter of seconds.

**Keep your system organized and ready for action.**

Automatically receive notifications when critical devices fail.

Monitor all system activity from any location.

Eliminate lengthy service calls through device-level ticketing.

Quickly audit environments to ensure security compliance.

# Secure Your Business With SiteOwl

SiteOwl brings clarity and awareness to multi-site security managers.

With SiteOwl, it's easy for you and your team to quickly resolve problems and minimize operational risk. This allows you to operate with confidence at all times.

**Security systems are  
hard to manage, but  
they don't have to be.**

We'd love to show you how SiteOwl can streamline your management process so that it's easier than ever to maximize your security readiness.
